

TABLE OF CONTENTS

Welcome Address	1
Interaction and Interdependence in Agricultural Development	3
Present and Future Outlook for Sweet Potato in Asia-Research and Development Needs	9
Strategies for Improving Protein Production in Sweet Potatoes	27
Breeding of Sweet Potato Varieties for High Starch Content and High Yield	33
Proximal Dominance and Sprout Formation In Sweet Potato (<i>Ipomoea batatas</i>) (L) Lam) Root Pieces	41
Flower Induction by Top Grafting in Sweet Potato	49
Cytotypes in Sweet Potato: Pentaploid and Heteroploid Types	59
Kumara (Sweet Potato) in the Cook Islands	67
Screening for Sweet Potato Weevil Resistance	81
Development of Varietal Screening Technique for Resistance of Sweet Potato to the Weevil, <i>Cylas formicarius</i> <i>elegantulus</i> Fabr.	97
The Interrelationship Between Photosynthetic Activity and Tuberous Root Growth in Sweet Potato Grafts	105
The Role of Root Crops, Their Prospects and Development Needs in the Pacific	115
Root Crops in Papua New Guinea	121
The Potential of the Winged Bean (<i>Psophocarpus tetragonolobus</i> (L) DC) as a Root Crop	135
Studies on Tuber Production in Winged Bean (<i>Psophocarpus</i> <i>tetragonolobus</i> (L) DC)	147
Post-harvest Operations and Marketing Channels of Potatoes in Thailand	153
The Role of Lime in Commercial Ginger Production in Australia	159
Jerusalem Artichoke (<i>Helianthus tuberosus</i> L.) – A Potential Root Crop for the Tropics	169
Root Tuber Technology Transfer	185
Breeding for Lowland Tropics Adaptation in Potato	191
Present and Future Roles of Yams (<i>Dioscorea</i> Spp.) in West Africa	205
Yam of Thailand and Species: Importance and Utilization	213
Collection, Selection and Agronomic Studies On Edible Yams (<i>Dioscorea</i> Spp) in Cameroon	217

Tuber Physiology in Yams (<i>Dioscorea</i> Spp) and Its Agricultural Implication	235
Effect of Heap Size and Fertilizer Application on Yam (<i>Dioscorea Rotundata</i>) in Southern Nigeria	245
Nutritional Repercussions of the Differences in Physico-chemical Characteristics of Starches of Two Yam Species Grown in Cameroon	259
The Cassava: Future Potential and Development Needs	281 ✓
Effect of Pre-Harvest Fertilization of Cassava (<i>Manihot esculenta</i> Crantz) Prior to Cutting for Planting Material, on Subsequent Establishment and Root Yield	301
Cytology and Cytochemistry of Vascular Discoloration in Cassava Roots	307
Tong Method: An Effective Screening Technique for Young Cassava Seedlings for Detecting Resistance Against CBB Disease in Zaire	317
Performance and Dry Matter Distribution of Cassava at Different Ages and Ecological Conditions in Ivory Coast	323
Bioconversion of Cassava –A Potential Source of Energy in India	339
Ecological Competition Among the Main Starchy Staples with High Moisture Content	345
The Effects of Various Levels of Cassava on Protein Utilization by Rats	377
Cassava Selection for the Republic of Zaire	385
Cassava Root and Foliage Within a Program for Poultry and Swine Feeding in the Tropics	399
Resistance to African Cassava Mosaic and Productivity of Improved Cassava Cultivars	415
On-Farm Evaluation of Improved Cassava Technology	431
Variation in Dry Matter Content of Tubers in Seedling Population of Three Crosses of Cassava	457
Relationships of Tuber Yield, Starch Content and Starch Yield of Cassava with Potassium Status of Fertilizer, Soil and Leaf	461
Importance and Implications of the Physiological Age of Seed Materials of Tropical Root Crops	475
Effect of Nitrogen Supply on Early Growth, Development and Nitrate Reductase Activity in Two Cassava Cultivars	487

An Anomalous High External Phosphorous Requirement for Young Cassava Plants in Solution Culture	507
The Effect of Soil Sterilization and Mycorrhizal Inocu- lation on the Growth, Nutrient Uptake and Critical Phosphorus Concentration of Cassava	519
The Importance of <i>Colocasia Esculenta</i> in West Java, Indonesia	539
The Dispersal of Taro by Common Palm Civets	545
The Status of Keladi China (<i>Colocasia Esculenta</i> (L) Schott) Cultivation in Peninsular Malaysia	549
Taro Production in the Philippines – Its Prospects and Problems	557
Taro Research and Development in Fiji	567
Taro Production in Western Samoa Potential Marketing Outlets and Problems in the Region	579
Cultivation of <i>Xanthosoma Sagittifolium</i> (L.) Schott or “Makue” in the Loyalty Islands	593
Taro Research at the University of Hawaii and its Implication for Other Countries	601
Variability in Taro Seedling Population	611
Preliminary Evaluation of 14 Puerto Rican and Six Ghanaian Varieties of Cocoyam (<i>Colocasia</i> and <i>Xanthosoma</i> Spp) Under Ghanaian Conditions	615
Yield and Related Components of Flooded Taro (<i>Colocasia Esculenta</i>) as Affected by Land Preparation Planting Density, and Planting Deph	629
Growth and Development of Taro (<i>Colocasia Esculenta</i>) Under Dryland Conditions in Fiji.	637
Cocoyam Production in Cameroon	647
Calcium Nutrition of Taro (<i>Colocasia Esculenta</i> (L.) Schott	665
The Comparative Phosphorus Requirements of Flood and Non-Flooded Taro	671
Storage Qualities of Extruded Taro Products	683
Major Factors Limiting Seed Set in Aroids	697
Promotion of Flowering and Production of Seed in Cocoyam (<i>Xanthosoma</i> and <i>Colocasia</i>)	703
Progress in the Breeding of Cocoyam (<i>Colocasia</i> and <i>Xanthosoma</i>	709
